(bei Antwort bitte angeben)

The GDA-Fumigation (GDA-F) of the company AIRSENSE Analytics GmbH, Hagenower Str. 73, 19061 Schwerin / Germany, is selected for regular measurements in the context of occupational safety in order to avoid health hazards that may arise from the handling and control of goods contaminated with dangerous gases in transport units, such as containers, vehicles, railway cars, tanks and other transport units. With the GDA-F the government agencies are able to examine and quality transport units before standard inspection and control process.

With the result of the measurements the amount of hazardous substances in the respective transport units can be estimated and the information is used to initiate further measures such as degassing and further protective steps of health risk mediation.

216 government agencies have been equipped with GDA-F units for this purpose since 2016. The contact person of the German Customs (Bundeszollverwaltung) on this subject is:

Generalzolldirektion
